A MAINTENANCE
PROGRAM
IS THE BEST
WAY TO KEEP
YOUR SYSTEMS
EFFICIENT

MARPOSS

PREVENTIVE
MAINTENANCE

MARPOSS
CARE

Evaluate the performance of the measurement equipment overtime is fundamental to verify its status and the reliability of measurements.

To ensure the best performance of your AEROEL equipment in terms of repeatability and accuracy, our experts are available for you to perform the following activities, in our laboratory or at your plant:

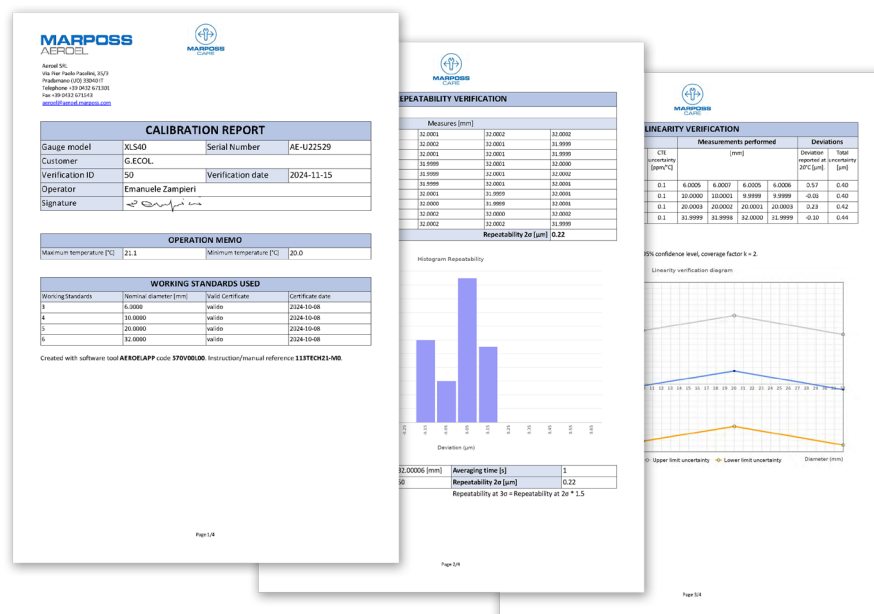

- Overall check of the equipment, for example, the VIDEO SIGNAL (optics status).
- Inspection of the conveyor belt (if present). In this case, the conditions of the pulley and the sliding guide will be checked and if their replacement are necessary (as a preventive maintenance).
- Check of metrological performance, issuing a Calibration Report. This activity is performed for each laser sensor, mono and biaxial through a specific Service Tool and dedicated masters.

SCHEDULE YOUR INTERVENTION

Marposs suggest performing the verification of your equipment once per year, but the deadline you choose is strictly connected to your Quality Requirement Procedure.

A Global network with local approach: You can count on skilled experts/Service personnel among the Marposs global network
