THE BEST
WAY TO KEEP
YOUR **SYSTEMS**
EFFICIENT

MARPOSS

PREVENTIVE
MAINTENANCE

MARPOSS
CARE

Evaluate the performance of measurement equipment over time is fundamental to verify the reliability of measurements results and the quality of product and process.

To ensure the best performance of your Aeroel equipment in terms of repeatability and accuracy, our experts are available for you to perform the following activities, in our laboratory or at your plant:

- Cleaning the external optics and checking the VIDEO SIGNAL (optics status)
- Inspection of the conveyor belt (if present). In this case, both the condition of the pulley will be checked and their preventive replacement possibly evaluated. At the same time, we will check the conditions of the sliding guide.

VIDEO SIGNAL WAVEFORM

- Check of metrological performance, issuing of a Verification Report. This activity is performed for each laser sensor, mono and biaxial through a specific AEROELAPP application and the use of dedicated masters:

SCHEDULE YOUR INTERVENTION

Marposs suggest performing the verification of your equipment once per year, but the deadline you choose is strictly connected to your Quality Requirement Procedure.

A Global network with local approach: You can count on skilled experts/Service personnel among the Marposs global network

AFTER SALES SERVICE
