PROGRAM!

CALIBRATION

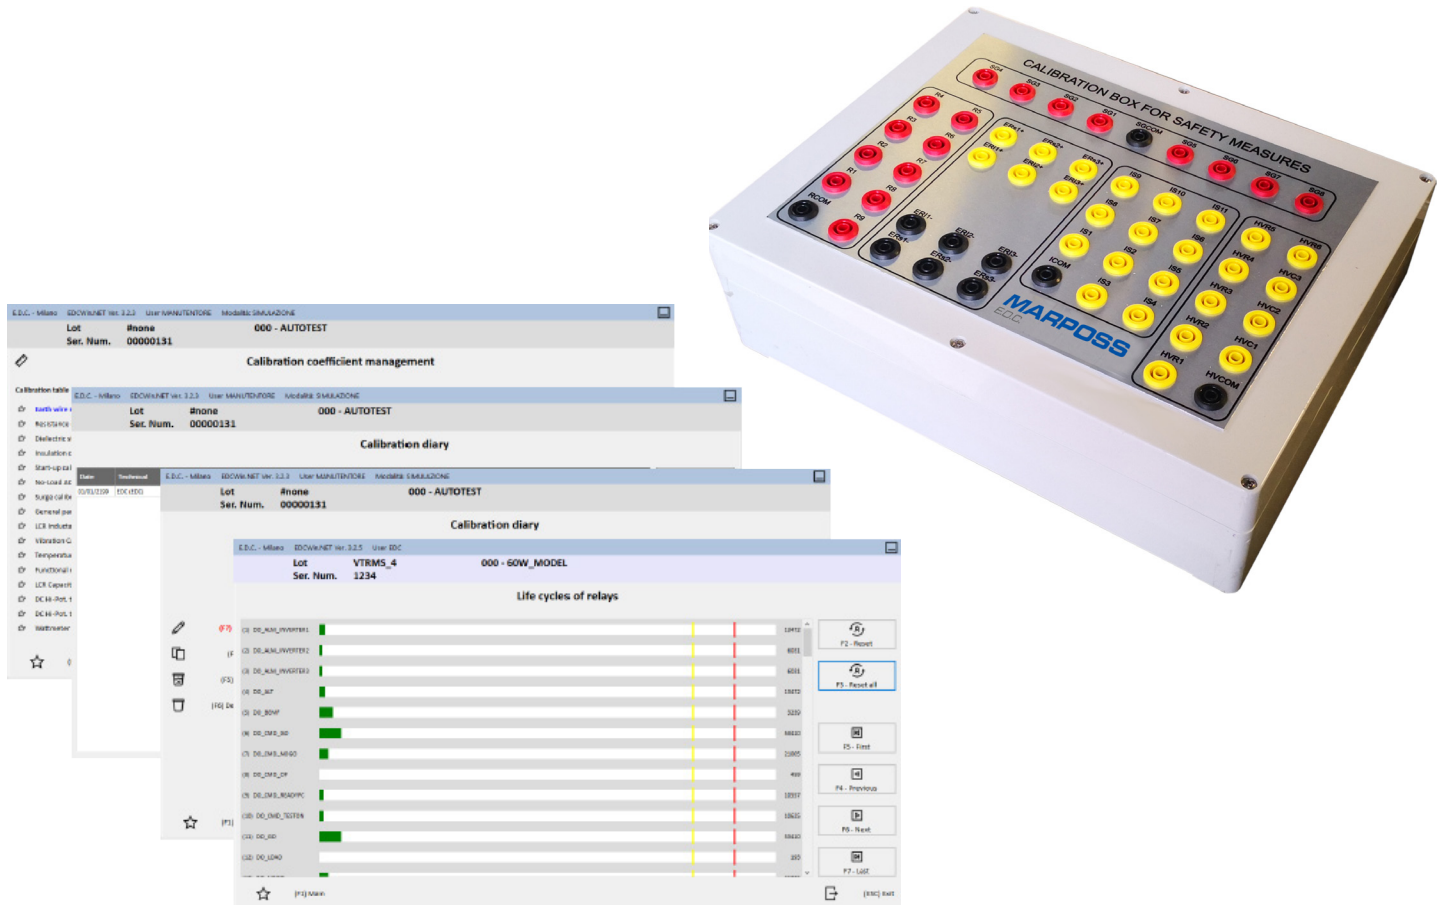

MARPOSS
CARE

Evaluate the performance of measurement equipment over time is fundamental to verify the reliability of measurements results and the quality of product and process.

Beyond the importance of executing a periodical maintenance of installed products, yearly bench re-calibration is frequently asked to meet the requirements of quality processes and regulation compliance.

Therefore, it is important to make periodic calibrations of your equipment to ensure correct performance and measurement results.

The periodic calibration is executed through a dedicated software interface and specific calibration boxes that allow a fine tuning of the product mappings, directly on site.

Marposs can help you to establish a calibration program and through scheduled interventions, an expert Marposs engineer, by using the necessary instruments, will perform calibration, adjustments, and some operations useful to verify what listed here below.

- ✓ Verification of the mechanical and electronic parts to check their efficiency and identification of the critical components that might need to be replaced
- ✓ Execution of ordinary maintenance
- ✓ Calibration of the various equipment measuring chains, for all available tests, to ensure the achievement of the agreed features

At the end of the planned operations, the qualified Marposs technician will give a calibration report stating the equipment status.

Our On Site Service Offer includes: multi-year contract, with special discount, for on-site activities.
